adidas's retro shoes took a fifth of its searches

1%
of adidas searches were Samba, Gazelle, Campus or Spezial in 2022

20%
in 2024

So did adidas sell more? I checked its share of searches against its share of revenue, next to Nike and Puma.

Google Trends, worldwide. Revenue from annual reports and 10-Ks, constant currency.

Share of search, in one line

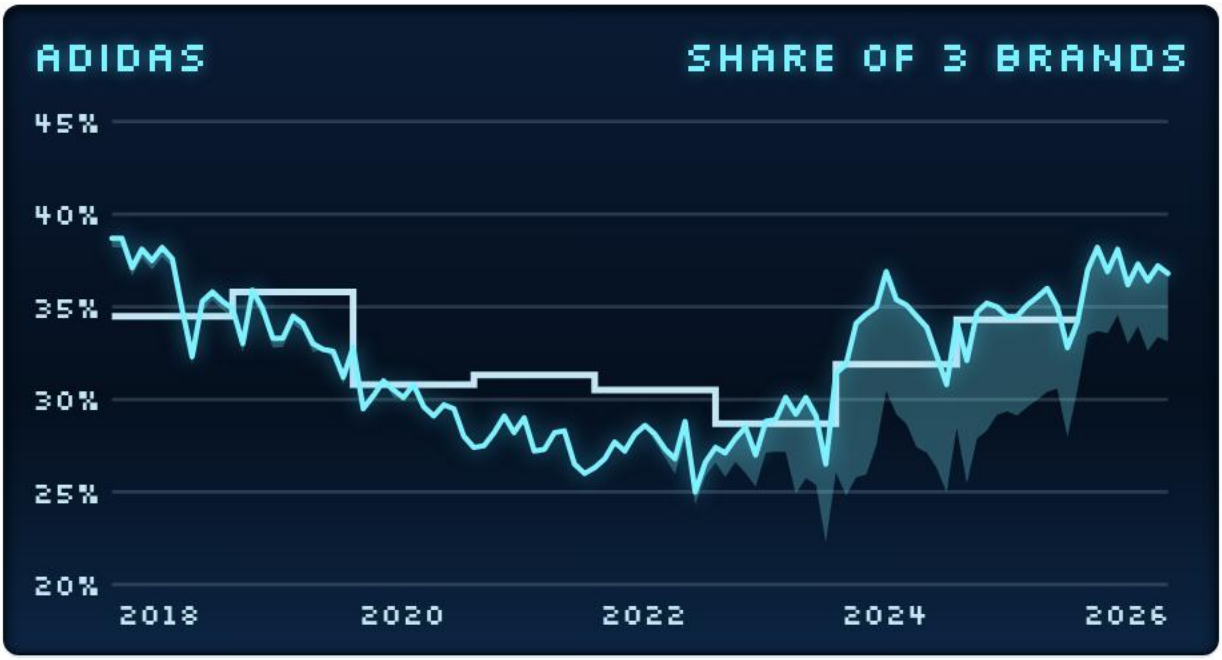

A brand's searches divided by all three brands' searches. The marketing effectiveness researcher Les Binet found it tends to run ahead of a brand's share of market.

I tested it on Nike, adidas and Puma from 2010 to 2025: does search share running ahead of revenue share come before revenue share rising?

Google Trends, worldwide. Revenue from annual reports and 10-Ks, constant currency.

Search jumped, then revenue share rose

Share of search Share of revenue Retro shoes

adidas's share of search rose from 27.2% in 2022 to 33.8% in 2024. Its revenue share rose 3.2 points in 2024 and 2.4 more in 2025.

One case, so it's exploratory.

Google Trends, worldwide. Revenue from annual reports and 10-Ks, constant currency.

The trap I caught: the euro

R 0.63
in US dollars

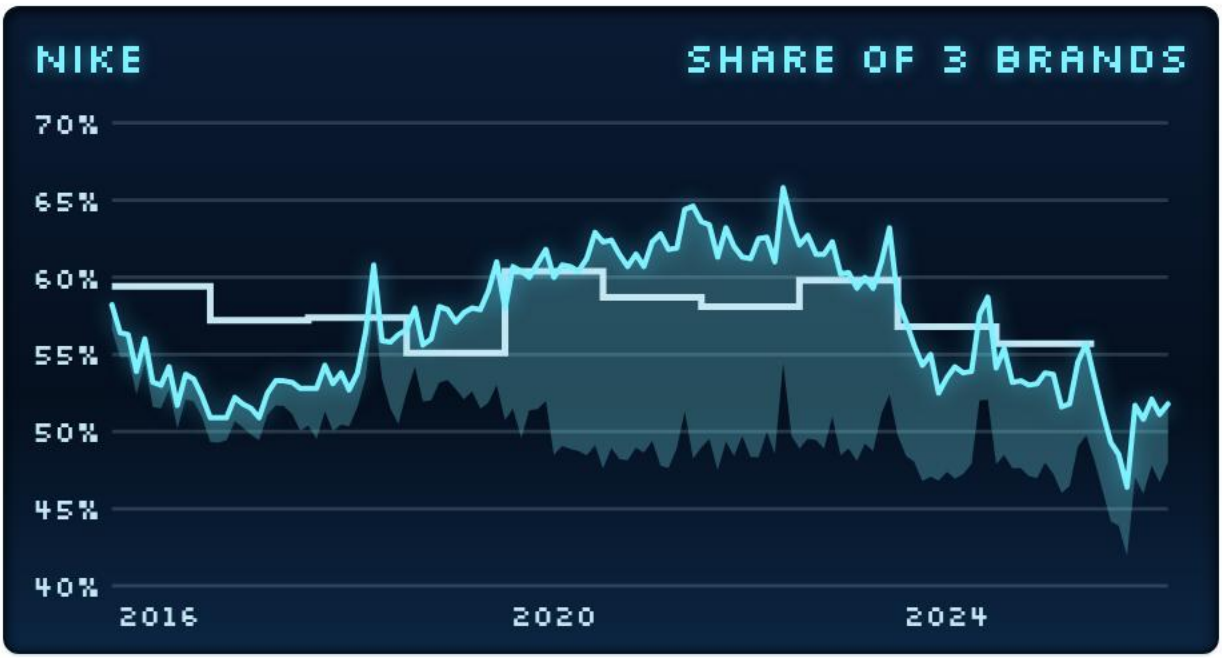

R 0.38
in constant currency

In dollars, search share looked like a strong one-year forecast. But adidas and Puma report in euros: when the euro rises, their dollar share rises with no extra sales. Held at one exchange rate, the forecast barely beat guessing "no change" (1.32 vs 1.35 points of error).

Correlation between search share running ahead of revenue share and the next year's change, 45 brand-years.

Google Trends, worldwide. Revenue from annual reports and 10-Ks, constant currency.

Nike's classics are fading

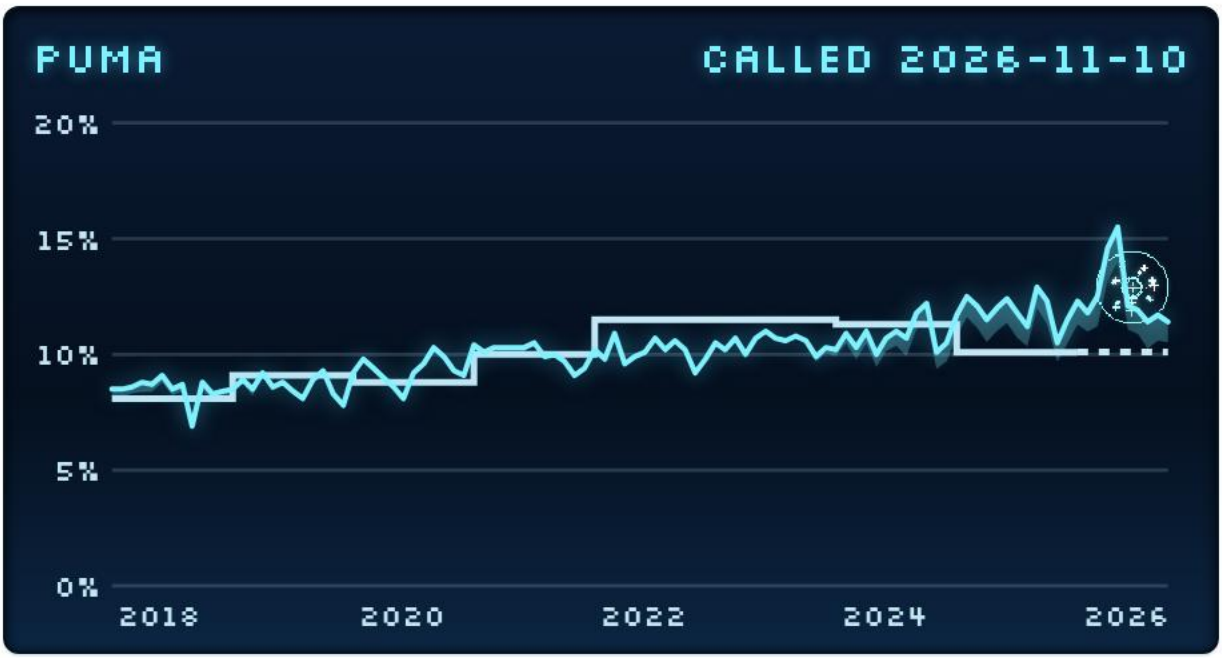

Share of search Share of revenue Retro shoes

Dunk, Air Force 1 and Jordan 1 went from 22% of Nike searches in 2021 to 11% in 2025, and Nike's share of search fell from 62.3% to 53.6%.

Exploratory: they moved together; this doesn't show which drove which.

Google Trends, worldwide. Revenue from annual reports and 10-Ks, constant currency.

My open call: Puma

Share of search Share of revenue Retro shoes

Speedcat and Palermo pushed Puma's share of search to 12.7% in 2026 so far, against a 2025 revenue share of 10.1%. If search leads, its 2026 revenue share should rise.

Scored in constant currency, when Puma reports its 2026 results in early 2027. A weak call: Puma is where the signal is weakest, and "puma" also catches the animal.

Google Trends, worldwide. Revenue from annual reports and 10-Ks, constant currency.

SO_WHAT.TXT

What I'd tell a brand team

1. **Track share of search monthly, and read it as direction, not a forecast.** It's free and it moves with share of revenue.
2. **Check currency before trusting any share chart.** Most of the forecasting edge here was the euro.
3. **Line up the next franchise before the retro wave peaks.** Nike's classics faded with its search share.
